PATENTS

2013-	Co-inventor on patent US8606781 B2 (Status: Granted) in the field of Computer Science, titled "Systems and methods for personalized search." Filing year 2005 – Grant year 2013 – Expiry year 2029.

Abstract: "Techniques are presented to provide personalized search results to a user. A user history optionally classified into projects or tasks is determined. A profile for the user is determined by identifying keywords, concepts or other user and/or task specific descriptors within user history documents. A proximal neighborhood based on the user's history and adjustable crawling parameters is determined. The adjustable crawling parameters define which documents linked to documents in the user history are included within the proximal neighborhood. A user query is determined and used to search the set of documents within the proximal neighborhood. The results are then ranked based on the user profile information. The ranked results are optionally displayed to the user."

The ownership extends to the following patent family:
- EP-1717720-A1 "Discovery of Related Documents Based on a Proximal Neighborhood Measure"
- JP-2007149057-A "Systems and Methods for Personalized Search"
